

📄

SUMMARY

I AM... a Staff Machine Learning Engineer at Intuit, building document understanding systems — extraction models, evaluation pipelines, and LLM-based code generation. A decade of production software spanning full-stack and ML. I work across machine learning, application development, and system architecture.

INFORMATION

Dallas, TX · (404) 775-6111 · sjk@sungjaekim.com

🎓

EDUCATION

Georgia State University · 2013 – 2018 · *Bachelor of Science in Computer Science*

☰

SKILLS

MACHINE LEARNING	LLMs & prompt engineering · Agentic systems (LangGraph, Claude Agent SDK) · Prompt management & versioning · Model evaluation & benchmarking · Document understanding (Donut, OCR) · Computer vision (R-CNN) · Confidence modeling · On-device inference (CoreML)
ML INFRASTRUCTURE	Training & data pipelines · Evaluation pipelines · Data labeling platforms · AWS Textract
FRONT-END	HTML · CSS + Bootstrap · React + Redux · Vanilla JavaScript + jQuery · Angular · AngularJS · React Native
BACK-END	Python · Node.js · Java · C# · Scala · SQL · GraphQL · Firebase
DATABASES	Microsoft SQL Server · MySQL/MariaDB · SQLite · MongoDB · Cassandra
OPERATIONS	AWS · Docker · Kubernetes · Jenkins · Splunk

🧰

EXPERIENCE

2024 – Present

Staff Machine Learning Engineer

Intuit | *Dallas, TX*

A2D – Document Understanding Platform

- Led the document understanding team through tax season readiness and a model retraining cycle, mentoring a group of junior engineers through it.
- Raised extraction accuracy past 95% precision and recall on six of eight prioritized tax forms, and cut latency 15–25% across forms.
- Onboarded Credit Karma onto the platform, covering consented-model handling and IRS Section 7216 training data.
- Prototyped Donut, an OCR-free document understanding transformer, for extraction.

2022 - 2024 Senior Machine Learning Engineer

Intuit | *Plano, TX*

A2D - Document Understanding Platform

- Led phase one of AnyDocIn, a platform for extracting data from arbitrary document types, directing six engineers across several partner teams from planning through release.
- Delivered the Tax Extraction and Orchestration Service on schedule with high unit test coverage and no production performance regressions, then led its recertification and traffic split.
- Shipped 1040 extraction for specialized tax solutions, leading the engineering team through the first release.
- Built generic confidence models for numeric, name, address, and date fields, generalizing earlier per-form models to work across document types.

2021 - 2022 Senior Software Engineer

Intuit | *Plano, TX*

Intuit AI - Document Understanding Platform

- Built and piloted Helios, a document-labeling platform started during self-directed innovation time. It saves roughly 2,000 engineering and labeling hours per year and 10 engineering hours per release, and has since expanded to support model evaluation and other teams.
- Trained and released confidence models for W-2 and 1099-G that cut filing time for the customer cohorts using them, and built the evaluation tooling the team used to track model performance.
- Expanded tax document extraction coverage to 1099-DIV, 1099-INT, and 1098 forms.
- Trained an R-CNN model for Box 12 detection and segmentation, plus an is-blank classifier so downstream products could tell a deliberately empty box from a failed extraction. Box 12 was the most frequently unextracted field on the form.

2019 - 2021 Software Engineer II

Intuit | *Plano, TX*

Tax Content - DNA

- Built the Context Based Compare application to speed up development of tax analyst programmers.

ProConnect Tax Online - App Fabric/Infrastructure (Inversion)

- Refactored ProConnect Tax Online's legacy Angular.js code into React to align with the rest of the company, enable faster future developments, speed up the app, and remove tech debt.

2018 - 2019 Software Engineer I

Intuit | *Plano, TX*

ProConnect Tax Online - OIA (Alexa)

- Reduced time spent by Customer Success through the successful delivery of Data Conversion in ProConnect Tax Online built using React + Redux.
- Built & contributed Step Flow component to the Intuit Design System (IDS) to accelerate the One Intuit ecosystem.
